

COMPANY CAPABILITIES

Cloud solutions. Production systems. Live experiences.

Strategy, engineering and technical production
under one accountable partner.

A CONNECTED DELIVERY MODEL

BASED IN LAGOS, NIGERIA

Built around the way your business needs to operate.

01 / ARCHITECTURE + ENGINEERING

End-to-end solutions. Designed to operate.

BOTXOFT is a Nigeria-based technology and production company. We help organizations plan, procure, build, modernize and operate digital platforms, media workflows and live audience experiences.

01 Cloud advisory & solution architecture

Translate business priorities into a practical target architecture and delivery sequence.

Cloud strategy / Architecture assessments / Technology roadmaps

02 Enterprise architecture

Connect business capabilities, applications, integration, infrastructure and governance.

Capability mapping / Target-state design / Transition planning

03 Infrastructure modernization

Plan cloud foundations, workload migration and platform modernization as one programme.

Landing zones / Identity and connectivity / Operational readiness

04 Security engineering & automation

Embed access controls, policy, monitoring and repeatable delivery into the operating model.

Security architecture / Infrastructure as code / Deployment automation

05 Cloud-native software engineering

Build applications, APIs and integrations around usable workflows and maintainable systems.

Cloud-native applications / APIs and integration / Delivery pipelines

02 / LIVE + MEDIA PRODUCTION

Every signal. One production plan.

BOTXOFT Studios delivers full-service technical production for conferences, corporate events, annual general meetings, broadcasts, and virtual and hybrid experiences.

01

Event staging & technical AV

Technical planning, stage systems, presentation playback, show control, setup and on-site operation.

02

LED display & visual systems

LED-screen services, display planning, signal distribution, processing, mapping and content playback.

03

Sound & audio production

Microphone and mixing workflows, event sound, monitoring, playback, recording and audio post-production.

04

Live broadcast & hybrid events

Multi-camera switching, remote contribution, speaker rehearsals, streaming and coordinated audience delivery.

05

Videography & photography

Event coverage, interviews, photography, recording, editing and content prepared for its intended use.

06

Virtual & cloud-enabled production

Virtual-production workflows and connected ingest, review, content processing, archive and distribution.

Advance planning / Rehearsals / Live operation / Recording and handover

03 / MEDIA-PRODUCTION INFRASTRUCTURE

Purpose-configured. Production-ready.

Equipment sourcing, custom system builds and workflow integration for media houses, professional production teams and live-event operators.

CUSTOM PRODUCTION + STREAMING WORKSTATIONS

More than equipment supply.

Component selection, assembly, configuration and integration around the production workload.

01 Requirements & system specification

Define workload, compatibility, operating environment, equipment scope and acceptance criteria.

02 Sourcing & procurement

Select suitable equipment and coordinate supply against the approved technical and commercial scope.

03 Build, configuration & integration

Assemble production and streaming PCs; configure live-production gear and connect the wider workflow.

04 Commissioning & handover

Check the agreed workflow and transfer the configuration records and documentation included in scope.

Equipment availability, lead times, warranties, delivery responsibilities and support are confirmed in the project proposal. Substitutions and material changes require client approval.

04 / SOFTWARE + HARDWARE

Specialist products. Connected workflows.

BOTXOFT develops software and hardware around the operating needs of media houses, production teams and organizations delivering live content.

CLOUD-NATIVE SOFTWARE AS A SERVICE

BOTXTREAM

Media operations for professional teams.

Botxtream brings media workflows into a cloud-native platform for media houses and professional production teams coordinating content, people, review and delivery across locations.

Live streaming / Virtual and hybrid production
Media management / Cloud-based content workflows

[Explore Botxtream >](#)

NETWORK CONNECTIVITY HARDWARE

Network Aggregator

A hardware offering for combining and managing multiple network connections, with VPN connectivity.

Discuss the required operating environment, supported configuration and current availability with BOTXOFT. Product specifications and delivery terms are confirmed separately.

05 / FROM BRIEF TO HANDOVER

A clear scope. A connected delivery.

Start with the outcome, the operating environment and the constraints. We will shape the architecture, equipment, software or production scope around the work.

- | | | |
|----|-----------------|--|
| 01 | Discover | Objectives, requirements, constraints, dependencies and acceptance criteria. |
| 02 | Design | Architecture, system scope, responsibilities, delivery plan and commercial proposal. |
| 03 | Deliver | Procurement, engineering, configuration, integration, testing or live production. |
| 04 | Handover | Agreed acceptance, documentation, operational knowledge and scoped support. |

LET'S DISCUSS YOUR REQUIREMENT
